Wet Tantalum Capacitors Military Styles CLR79, CLR81, CLR90, and CLR91

ITEM	PERFORMANCE CHARACTERISTICS		
Operating temperature range	-55 °C to +85 °C (to +125 °C with voltage derating)		
Capacitance tolerance	± 20 %, ± 10 %, at 120 Hz, at +25 °C		
Capacitance change by temperature	Limit per Standard Ratings table		
ESR	For CLR90 and CLR91: limit per Standard Ratings table, at +25 °C, 120 Hz For CLR79 and CLR81: refer to M39006/22		
Impedance	Limit per Standard Ratings table, at -55 °C, 120 Hz		
DCL (leakage current)	Limit per Standard Ratings table		
AC ripple current	Limit per Standard Ratings table, at +85 °C and 40 kHz		
Reverse voltage	Reverse voltage rating at +85 $^\circ\text{C}$ is 3 V_{DC} and at +125 $^\circ\text{C}$ is 2 V_{DC}		
Maximum operating voltage	Rated (+85 °C) V _{DC}	Derated (+125 °C) V _{DC}	Surge (+85 °C) V _{DC}
	6	4	6.9
	8	5	9.2
	10	7	11.5
	15	10	17.2
	25	15	28.8
	30	20	34.5
	50	30	57.5
	60	40	69.0
	75	50	86.2
	100	65	115.0
	125	85	144.0

PERFORMANCE CHARACTERISTICS			
ITEM	CONDITION	POST TE	EST PERFORMANCE
Surge voltage 85 °C 1000 successive test cycles		The capacitors shall meet the req	uirements of MIL-PRF-39006:
	at the applicable DC surge voltage specified in series with a 1 k Ω resistor at the rate of 30 s ON, 5.5 min OFF	DC leakage Capacitance change Dissipation factor	Not to exceed the specified value Within ± 5 % of initial measurement Not to exceed the specified value
5.5 mm OFF		There shall be no evidence of me	chanical damage or leakage of electrolyte
Life testing	Life testing Method 108 of MIL-STD-202.	The capacitors shall meet the requirements of MIL-PRF-39006:	
	Capacitors shall be capable of withstanding a 10 000 h life test at a temperature +85 °C at rated voltage	DC leakage at 85 °C and 125 °C DC leakage at 25 °C Capacitance change Dissipation factor Dielectric withstanding voltage Insulation resistance	Not to exceed 125 % of the specified value Not to exceed the specified value Within +10 %, -20 % of initial measurement Not to exceed 200 % of the specified value 2000 V_{DC} , min. 100 M Ω , min.
AC ripple life As specified in MIL-PRF-39006:	The capacitors shall meet the req	uirements of MIL-PRF-39006:	
2000 h, +85 °C		DC leakage Capacitance change Dissipation factor	Not to exceed the specified value Within ± 10 % of initial measurement Not to exceed the specified value
		There shall be no damage, obli	teration of marking, or leakage of electrolyte

ENVIRONMEN	ENVIRONMENTAL CHARACTERISTICS			
ITEM	CONDITION	POST TEST PERFORMANCE		
Stability at low and high temperatures	As specified in MIL-PRF-39006	The capacitors shall meet the requirements of MIL-PRF-39006		
Moisture	Method 106 of MIL-STD-202	The capacitors shall meet the requirements of MIL-PRF-39006:		
resistance		DC leakageNot to exceed 125 % of +25 °C specified valueCapacitance changeWithin ± 8 % of initial measurementDissipation factorNot to exceed 115 % of the specified value		
Thermal shock	Method 107 of MIL-STD-202, condition A	The capacitors shall meet the requirements of MIL-PRF-39006:		
	(with step 3 at +125 °C) Number of cycles: 300 cycles for qualification and group C, subgroup 7;	DC leakage Not to exceed 200 % of +25 °C specified value for qualification and group C		
		DC leakage Not to exceed 125 % of +25 °C specified value for group B		
	30 cycles for group B and group C, subgroup 8	Capacitance changeWithin ± 5 % of initial measurementDissipation factorNot to exceed 115 % of the specified value		
Salt atmosphere (corrosion)	Method 101 of MIL-STD-202, condition B (48 h)	There shall be no harmful corrosion, and the finish shall protect at least 90 % of any exposed metal surface of the capacitor. There shall be no unwrapping of, or mechanical damage to, the insulating sleeving, when applicable. Marking shall remain legible		
Low	Method 502 of MIL-STD-810,	The capacitors shall meet the requirements of MIL-PRF-39006:		
temperature storage	Storage temperature: -62 °C +0 °C, -3 °C. Exposure time: 72 h followed by a 1 h exposure at +125 °C, +7 °C, -0 °C within 24 h after low temperature storage	DC leakageNot to exceed the specified valueCapacitance changeWithin ± 5 % of initial measurementDissipation factorNot to exceed the specified value		
		There shall be no evidence of leakage of electrolyte		
Seal	Method 112 of MIL-STD-202, conditions A or D, and C	When the capacitors are tested as specified in MIL-PRF-39006, there shall be no evidence of leakage.		
Barometric pressure (reduced)	Method 105 of MIL-STD-202, condition E (150 000 ft) (45 720.1 m)	There shall be no flashover, breakdown, or harmful deformation of the case, and mechanical damage, obliteration of marking, or leakage of electrolyte.		

ITEM	CONDITION	POST TEST PERFORMANCE	
Shock (specified pulse)	Method 213 of MIL-STD-202, condition I (100 g's) or condition D (500 g's) for "H" designated units	The capacitors shall meet the requirements of MIL-PRF-39006	
Vibration, high frequency	Method 204 of MIL-STD-202, condition D (20 g's) or condition H (80 g's) for "H" designated units	The capacitors shall meet the requirements of MIL-PRF-39006	
Random vibration ("H" designated units only)	Method 214 of MIL-STD-202, condition II-K (53.79 g's).	The capacitors shall meet the requirements of MIL-PRF-39006:DC leakageNot to exceed 125 % of the specified valueCapacitance changeWithin ± 5 % of initial measurementDissipation factorNot to exceed 115 % of the specified valueThere shall be no evidence of harmful corrosion, mechanical damage, obliteration of marking, or leakage of electrolyte.	
Solderability	Method 208 of MIL-STD-202	The capacitors shall meet the requirements of MIL-PRF-39006	
Terminal strength	Pull test: method 211 of MIL-STD-202, condition A. Wire-lead bend: in accordance with MIL-PRF-39006	There shall be no loosening of or permanent damage to the terminals, terminal weld or solder, or seal.	
Dielectric withstanding voltage	Method 301 of MIL-STD-202, 2000 V _{DC} min.	The capacitors shall meet the requirements of MIL-PRF-39006	
Insulation resistance	Method 302 of MIL-STD-202, condition B (500 V _{DC} ± 10 %)	The insulation resistance shall be not less than 100 $\mbox{M}\Omega$	
Resistance to solvent	Method 215 of MIL-STD-202	There shall be no mechanical or visual damage to capacitors post-conditioning. Marking shall remain legible, no degradation of the can material.	
Resistance to soldering heat	Method 210 of MIL-STD-202, condition C	The capacitors shall meet the requirements of MIL-PRF-39006: DC leakage Not to exceed the specified value Capacitance change Within ± 5 % of initial measurement Dissipation factor Not to exceed the specified value There shall be no evidence of mechanical damage
