OPTOELECTRONICS

Guide to Industrial Applications

Introduction

As one of the world’s leading suppliers of infrared emitters, photo detectors, optocouplers, and optical sensors, Vishay Intertechnology offers an extraordinarily broad portfolio of optoelectronic products. Whether you require the high speed of a PIN photodiode, the sensitivity of an ambient light sensor, the intensity of a surface emitter, the optical isolation of an optocoupler, or object detection with a reflective or transmissive sensor, Vishay has a solution. Behind these products stands a vertically integrated optoelectronics company with over 30 years of experience in emitter and detector die fabrication and packaging. This guide provides product recommendations for key applications.

Applications

There are literally thousands of applications that use an infrared emitter, photo detector, or optical sensor. Twelve key applications will be covered in the following pages.

- Illumination
- Smoke and Flame Detectors
- Long-Range Presence and Proximity
- Short-Range Presence and Proximity
- Ambient Light Sensors
- Touch Control
- Safety Barriers / Light Curtains
- Motor Control AC Variable-Speed Industrial Drives
- Remote Control
- Data Transmission
- Isolated Industrial Communications

Illumination

Security cameras are nearly everywhere, and where they are not, they soon will be. Most crimes are committed after dark. Security cameras need infrared illumination to be effective at night. To illuminate the field of view of the cameras, infrared emitters may be on for up to 16 hours per day. The two critical performance factors used in choosing an infrared emitter are radiant intensity and degradation. High radiant intensity yields longer illumination distance and greater resolution. Low degradation minimizes resolution loss over time. If the emitters degrade, resolution and range are reduced, which makes the cameras less effective.

Industry's Best Performing 5 mm Emitters

Vishay's TSHG5210 and TSHG5410 infrared emitters outperform the competition in radiant intensity and minimum degradation. Adding to their competitive edge, the TSHG5210 and TSHG5410 can be driven at 100 mA DC, while the competition recommends only 50 mA. The peak wavelength of these emitters is 850 nm, matched to security camera sensors.

	Competitors			Vishay	
	A	B	C	TSHG5210	TSHG5410
Intensity (mW/sr)	171	107	130	230	90
4000 h Degradation (100 mA)	up to 60 %			< 5 %	< 5 %

Closed Circuit TV in HD

One SurfFlight VSMY7850X01 can replace anywhere from 10 to 20 standard 5 mm emitters currently used in today's cameras. Instead of 40 emitters, security cameras will have only 4. The field of view can remain the same or can be tailored using external lenses to achieve HD resolution.

Additional Applications

- Automotive
 - Drowsy driver
 - Illumination for heads-up display
- Machine vision

Emitters

Mounting	Package	Part Number	Angle of Half Intensity (±°)	Radiant Intensity (mW/sr)	Rise and Fall Time (ns)	Peak Wavelength (nm)
Through-hole	5 mm	TSHG5210	10	230	20	850
		TSHG5410	18	90	20	850
		TSHG6210	10	230	20	850
		TSHG6410	18	90	20	850
SMD	Dome lens	VSMY2850	10	90	10	850
	PLCC-2	VSMY3850	60	150	15	850
	Little Star®	VSMY7850X01	60	170	20	850
		VSMY7852X01	60	42	15	850

Stand-offs limit how far the lead can be inserted in the through-hole of the PCB. The TSHG5xxx emitters feature a stand-off.

Smoke and Flame Detection

Depending on the combustible material, a fire emits light in multiple spectrums: ultraviolet (UV), visible, near infrared, and far infrared. Standard smoke detectors used in homes operate on a reflective technology where the smoke particles reflect infrared light that is then received by a photo detector. Consumer smoke detectors use 5 mm emitters with a peak wavelength of 940 nm. Recent studies indicate that the shorter wavelength of 870 nm can be more effective at detecting particles. In industrial applications where the combustible material varies widely, multiple sensing technologies are used.

TEMD5080X01 Product Focus

For sensing UV, visible, and infrared light, the TEMD5080X01's overall spectral sensitivity range of 350 nm to 1100 nm includes UV radiation, visible light, and near-infrared radiation. The TEMD5080X01 is a PIN photodiode with 300 % higher UV sensitivity at 400 nm compared to standard PIN photodiode chip technology.

Photo Detectors

New Products

VSLY5850 – 5 mm emitter

- 850 nm peak wavelength
- $\pm 3^\circ$ angle of half intensity
- 600 mW/sr at 100 mA
- $I_e = 6.0$ mW/sr at 1 A
- $I_v = 55$ mW at 100 mA

VBPW34FAS, -SR

- Direct replacement for Osram parts
- Lower forward voltage of 1.0 V
- Wider angle of half sensitivity of $\pm 65^\circ$

Mounting	Package	Part Number	Angle of Half Sensitivity (\pm°)	Photo Current	Spectral Sensitivity (nm)	Peak Wavelength (nm)
Through-hole	5 mm	BPV10NF	20	60 mA	790 to 1050	940
		BPV22NF	60	85 (μ A)	790 to 1050	940
SMD	SMD	VBPW34FAS	65	55 (μ A)	780 to 1050	950
		VBP104FAS		35 (μ A)	780 to 1050	950
		TEMD5080X01		60 (μ A)	350 to 1100	940
	Dome lens	VEMD2020X01	12	12 (μ A)	750 to 1050	950
		VEMD2000X01	12	12 (μ A)	750 to 1050	950

Emitters

Mounting	Package	Orientation	Part Number	Angle of Half Intensity (\pm°)	Radiant Intensity (mW/sr)	Rise and Fall Time (μ s)	Peak Wavelength (nm)
Through-hole	5 mm	Top view	VSLY5850	3	600	20	850
		Top view	TSFF5210	10	180	15	870
		Top view	TSAL6100	10	130	800	940
SMD	Dome lens	Reverse gullwing	VSMB2000X01	12	40	15	940
		Gullwing	VSMB2020X01	12	40	15	940
		Gullwing	VSMY2850G	10	100	10	850
		Reverse gullwing	VSMY2850RG	10	100	10	850

Data Transmission

Transferring large amounts of data via infrared over long ranges requires an array of high-intensity emitters with extremely fast switching times to enable data communication at speeds up to 16 Mbit/s. Whether the application is infrared payment at toll collect stations like those found in Germany, Singapore, and Malaysia, or sending signals to infrared headphones for the hearing impaired in museums, concert halls, and other public venues, fast switching times are the key product parameter.

VSMF4720 and TSFF5510 Product Focus

For toll collect systems, Vishay introduced the VSMF4720, an 870 nm SMD infrared emitter with the industry's lowest forward voltage and highest radiant intensity of any such device in the PLCC2 package. In a leaded device, Vishay offers the TSFF5510, which has a viewing angle of $\pm 38^\circ$, enabling significantly better performance than standard 5 mm emitters. The combination of a wide viewing angle, high drive currents up to 1 A, and high switching speeds makes the VSMF4720 and TSFF5510 infrared emitters ideal for infrared data, audio, and video transmission.

VSMF4720 – PLCC2

- $\pm 60^\circ$ angle of half intensity
- $I_e = 16 \text{ mW/sr}$ at 100 mA
- Switching at 15 ns

TSFF5510 – 5 mm

- $\pm 38^\circ$ angle of half intensity
- $I_e = 32 \text{ mW/sr}$ at 100 mA
- Switching at 15 ns

New Products

- TSFF5410 $\varphi = \pm 22^\circ$
- TSFF5210 $\varphi = \pm 10^\circ$
- VSMF4710 (870 nm)

Infrared Remote Control

Vishay is the world's leading supplier of remote control receivers used in the consumer electronics and light industrial markets. No other supplier offers a similar breadth of products, holders, application and technical support, and overall knowledge of infrared communication. Our customers have confidence that our IR receivers will receive the remote control signals while filtering out noise in the most demanding ambient environments. Vishay's IR receivers are used for remote control, 3D active glasses synchronization, and for transmissive and reflective sensors.

VSLB3940 and VSLB3948

Every remote control receiver needs an infrared emitter. Vishay has recently introduced a series of 3 mm diameter emitters with performance characteristics comparable to leading 5 mm emitters. The new VSLB3940 and VSLB3948 infrared emitters features an on-axis radiant intensity of 65 mW/sr and optical power of 40 mW at 100 mA — which represents about an 8 % performance improvement over the larger, 5 mm TSAL6200 in a 40 % smaller form factor.

Emitters

Part Number	Peak Wavelength (nm)	Package	Intensity (mW/sr)	Angle of Half Intensity (\pm°)	Rise / Fall Time (ns)
TSAL6100	940	5 mm (T1¾)	170	10	15
TSAL6200	940	5 mm (T1¾)	60	17	800
TSAL4400	940	5 mm (T1¾)	15	18	800
VSLB3940	940	3 mm (T1)	70	19	30
VSMB2948SL	940	Side View	20	25	15

A - Forward voltage at 100 mA

R_1 and C_1 are recommended for protection against EOS. Components should be in the range of $33 \text{ W} < R_1 < 1 \text{ kW}$, $C_1 > 0.1 \text{ }\mu\text{F}$.

Meters

Electric, gas, and water meters use optoelectronic components to measure usage by monitoring an encoding wheel to detect tampering through the use of tilt sensors, and to read the meter and perform maintenance diagnostics. Smart meters are replacing the traditional electric meter in many countries. A smart meter is an advanced meter that identifies consumption in more detail than a conventional meter and often communicates that information via some network back to the local utility for monitoring and billing purposes. Smart meters measure not only total consumption but also when the energy was consumed. Many smart meters still include encoding wheels. They also provide for real-time diagnostics using infrared communication.

VBPW34FAS, -SR

- Direct replacement for Osram parts
- Low forward voltage of 1.0 V
- Wide angle of half-sensitivity of $\pm 65^\circ$
- Also available in reverse gullwing

Dome Lens Portfolio

- Low off-axis deviation of radiation
- Current portfolio includes angle of $\pm 15^\circ$
- Qualified for automotive applications
- Improved power performance

VOWXX Widebody, High Isolation and High Creepage Couplers

- Widebody package with > 10 mm clearance and creepage distance
- High working voltage up to 1414 V
- High transient voltage 8000 V
- Data rate of 1 MBd and 10 MBd
- High operating temperature up to 100 °C
- Extreme high common mode transient immunity up to 40 kV/ μ s typ
- Fulfills IEC/EN 61010-1 overvoltage protection category requirement

Safety Guards, Industrial Automation

Light curtains include an array of infrared transmitters that emit modulated and pulsed light, and a corresponding array of photo detectors to receive the light. When an object interrupts or breaks one or more beams, the control logic of the light curtain sends a stop signal to the guarded machine. A similar transmissive or interrupter arrangement is used for automatic gates and garage doors or in industrial automation where product position, fill levels, and conveyor operation are monitored.

Light Curtain

The new AEC-Q101-qualified VEMD20x0X01 PIN photodiodes and VEMT20x0X01 phototransistors feature an operating temperature range of -40 °C to +100 °C, are available in 1.8 mm gullwing and reverse gullwing surface-mount packages, and have a matching emitter in the recently introduced high-intensity, high-speed VSMB20x0X01.

VEMx20x0X01

- 4-week floor life without baking
- 1 nA dark current
- Matched emitter pairing

OPTOELECTRONICS

Guide to Industrial Applications

Ambient Light Sensors

Optimizing the backlight intensity of a display based on the ambient light ensures that operators get a clear view of a machine's status. Meter reading equipment and ruggedized hand-held sensors are used in direct sunlight conditions as well as in dark utility tunnels. An ambient light sensor helps optimize the visibility of the display while extending the battery life by controlling LCD intensity. As cities and municipalities around the world begin to implement solid-state lighting, these lights will also feature ambient light sensors. Not only will the sensors be used to turn on and turn off the lights, they will also be used to ramp up the intensity and slowly dim the lights during dusk and dawn.

Phototransistors and Photodiodes

Output	Part Number	Mounting	Size (mm)	Peak Wavelength (nm)	Bandwidth (nm)	Angle of Half Sensitivity (±°)	Light Current Standard A (µA)

Integrated Proximity and Ambient Light Sensors

VCNL3020, VCNL4020

VCNL4020X01

VCNL4010

The VCNL4010, VCNL4020, and VCNL4020X01 are fully integrated proximity and ambient light sensors. Fully integrated means they contain the infrared emitter and photo detector for proximity, an ambient light sensor, a signal processing IC, and I²C communication interface. VCNL4020X01 is qualified for automotive applications. It has a maximum operating temperature of 105 °C. The VCNL3020 supports only proximity sensing; it does not contain an ambient light sensor. With full 16-bit resolution for both the proximity and ambient features, user-defined interrupt levels, and multiple packaging options, the VCNL portfolio will fulfill your requirements.

Features

- Proximity function
 - 16-bit resolution
 - Excellent crosstalk immunity
 - Programmable LED drive current from 10 mA to 200 mA in 10 mA steps
 - Programmable measurement rate from 1 Hz to 250 Hz
 - Proximity distance up to 20 cm (8 in.)
 - Includes driver for an external emitter for increased range
- Ambient light function
 - Built-in ambient light PIN photodiode with close to human eye sensitivity characteristic
 - 16-bit dynamic range for ambient light detection from 0.25 lx to 16 klx
 - 100 Hz and 120 Hz flicker noise rejection

Applications

- Smart phone display control
- Digital camera display control
- Monitor sleep / wake function for displays on ATMs and Vending machines
- Touchless light switch
- Refrigerator water / ice dispenser
- Paper towel dispenser
- Soap dispenser
- Automatic toilet flushing
- Automatic water faucet
- Industrial door or latch switch
- Proximity guide for pick and place equipments

Gesture Recognition

In applications in which safety might be compromised, such as when a user must find a knob or push a specific button, a user can operate a machine through gestures in a wide active field where gross movements can replace fine movements for a simple and more intuitive interface with the machine.

A streamlined method of adding touch-less swipe right, swipe left, proximity and tap control to any device by using a VCNL4020 and two discrete infrared emitters. The VCNL4020 Gesture Control Sensor Board is the ideal tool to quickly prove a design concept and to start initial hardware and software gesture control development.

Fig.1: Vishay's gesture-control system consists of just two IR LEDs and a single proximity sensor

The detection of gestures using the gesture control sensor board is accomplished by comparing the signal of infrared light coming from each of the VSMF2890RGX01 emitters. The emitted infrared light is reflected from an object, for example a hand, and then detected by the VCNL4020 proximity sensor. In order to differentiate between the signals coming from either emitter, the emitters are multiplexed, meaning they are pulsed one after the other in quick succession. The proximity signal is then read out between each pulse via the I2C bus interface. When a hand is in the proximity of the board, it will reflect more signal from the emitter it is directly located over. If the hand is then moved across the board, the signal from one emitter will increase before the other. It is this time difference of signal strength that is analyzed to determine if a swipe gesture was made and in which direction.

Evaluation Kits

An evaluation kit is available, along with an add-on demo board for each of the sensors. Contact any catalog distributor or a local Vishay sales representative to purchase the Sensor Starter Kit. Please contact sensorstechsupport@vishay.com in order to receive the VCNL4010, VCNL4020X01, VCNL3020, or VCNL4020 gesture control add-on boards.

Phototriacs for Motor Control

The photo detector in a phototriac is a photo sensitive TRIAC, sometimes called an optotriac. Phototriacs are used to switch on and off AC loads. Turning on the infrared emitting diode allows current to flow to the AC load. Phototriacs are primarily used as a silicon-controlled rectifier (SCR) or as a pre-driver to a TRIAC. They are commonly found in industrial applications such as in motor control. As optocouplers, they isolate the low-voltage control circuitry and people from the high-voltage mains.

Phototriacs

Phototriacs can be zero-crossing and non-zero-crossing. This simply describes when the output current turns on. In a non-zero-crossing phototriac, the output current turns on when the infrared emitting diode turns on, regardless of the AC voltage phase. In the diagrams below, the yellow line is the input current and the fuscia line is the output current. Note that when the input current goes high (on), the output current turns on immediately. For a zero-crossing phototriac, the output turns on when the infrared diode turns on and when the AC voltage crosses zero. In the diagram, when the yellow input current goes high, the output does not immediately turn on. Only when the AC voltage crosses zero does the output go high. Both turn off when the infrared emitter turns off and the AC line crosses zero.

Non-Zero-Crossing

	Part Number	Package	V_{ISO} (V_{RMS})	I_{FT} (mA)	V_{DRM} (V)	dV/dt min. (V/ μ s)	Operating Temperature (°C)	
Zero-Crossing	IL410/IL4108	DIP-6 SMD-6	5300	2	600	10 000	- 40 to 100	
	VO4154 Series			1.6, 2, 3		5000		
	VO3062			10		1500		
	VO3063			5		1500		
IL420/IL4208	2			10 000

	VOM3053			5		1500		
	VOM160R/P/T			5, 7, 10		500		

Long-Range Presence and Proximity Sensors

Long-range sensors from many suppliers adjust their detection threshold depending on the amount of ambient light and optical noise present in the environment. When noise is present, the gain of the amplifier is reduced to avoid false detections. When exposed to lower light levels, the adjustable gain makes the receiver too sensitive. It will detect reflected or stray light.

Digital Output

Vishay's TSSP4038, TSSP6038, and TSSP58038 eliminate these problems by featuring a *fixed gain*. With a fixed gain, the detection threshold and resulting detection distance is fixed. Once the design of the optical parameters, such as the intensity of the emitter, the aperture in front of the receiver, and the alignment of emitter and detector are determined, the sensor will have stable, repeatable performance under all lighting conditions. *The output is a simple digital state indicating a detection.*

Analog Output: Proximity

Many applications require a reflective sensor that detects not only presence but also the strength or weakness of the reflected signal. Instead of a fixed detection threshold, analog information from the sensor is needed. This is possible with Vishay's infrared sensors with variable gain, also called the "P" or proximity sensors: TSSP4P38, TSSP6P38, and TSSP58P38.

Fast Response Time

People's lives depend on light curtains and perimeter guards having fast reaction times. Unfortunately, some sensors require the infrared beam to be interrupted for up to 5 ms before detection. The 300 μ s response time of Vishay's sensors is much faster. For the fastest response time, a continuous 38 kHz signal should be used. For the longest distance, we recommend driving the TSAL6100 infrared emitter using a 38 kHz burst.

Part Numbers*		Supply Current (mA)	Supply Voltage (V)	Response Time (μ s)	Light curtain Range (m)	Reflective Range (m)

Motion Control Reflective and Interrupter Sensors

In manufacturing environments, applications for optoelectronics products are virtually endless. Here we list a few examples where Vishay’s reflective and transmissive sensors are used.

Application Examples

- Control the speed of a spinning shaft
- Limit the slack in a drive belt
- Enable controlled shutdown of an auto loom machine when a thread breaks
- Monitor the revolutions in a gas or water meter
- Monitor fluid levels in an overflow tank
- Check the direction and speed of a spinning wheel
- Sense stack height
- Guide a movable stage
- Check contents of a package
- Check packaging seats
- Monitor adhesive dispensing
- Industrial optical switch
- Interface to encoding wheels and strips
- Detect the status of a door or panel, inserted coin, or credit or ATM card
- Printers, copier, scanners, computer servers, networking equipment, vending machines, ATM machines

Benefits

- Fully AEC-Q101 qualified
- Released for high operating temperatures up to 125 °C
- Moisture sensitivity level (MSL): 1 (Unlimited floor life)
- Available in different dome heights for additional mechanical tolerance.

Solar and Wind IGBT Drivers

Optically isolated IGBT drivers are used to isolate the high-voltage stage of an DC/AC inverter from the low-voltage control circuitry. Isolation is required for safety purposes because string inverters are inverting a high-voltage DC output from the solar panels to a high-voltage output that will be fed to the utility grid. This high voltage must be isolated from the user accessible low-voltage circuitry. Optically isolated IGBT drivers also allow the designers to separate low-noise control circuitry from noisy high-voltage and high-current circuitry, which improves performance, shrinks product size, and simplifies the design process.

Optically Isolated IGBT Drivers

Part Number	Output Current, I_o (A)	Operating Voltage Range, V_{CC} (V)	Pulse Width Distortion, PWD max (μ s)	Supply Current, I_{CC} (mA)	Common Mode Rejection, CMR min. (kV/ μ s)	V_{IORM} (V_{RMS})	External Creepage Distance (mm)
VO3120	2.5	15 to 32	0.2	2.5	25	890	8
VO3150A	0.5				48	1050	8
VOL3120	2.5				25	1414	10
VOW3120	2.5						

Optical Isolation - Low Input Current (I_F) Optocouplers

Optocouplers are designed to protect sensitive control circuitry and people from high-voltage transients or spikes. They isolate the low- and high-voltage sides by using an infrared emitter to transmit the control signal to a photo detector. There is no way for the voltage spike get from one side to the other; they are galvanically isolated. The 4-pin couplers are the most commonly used optocouplers. Low input current, high isolation voltage, long creepage and long distance through the insulation, and competitive pricing are features of Vishay's 4-pin optocoupler portfolio.

Application Examples

Power Supplies

- Isolated DC converters
- SMPS
- AC adapters
- DC/DC bricks

Industrial I/O

- Isolated 4 mA to 20 mA control loops
- Isolated serial communications

Smart Grids

- Grid voltage detection
- ZC detection
- Communication isolation

Industrial Automation

- Switching supply
- I/O isolation
- Feedback control loops

AC Input

OPTOELECTRONICS

Guide to Industrial Applications

Industrial Solid-State Relay, Single-Component Solutions Off-the-Shelf Integrated SSR Solutions

Vishay has a wide range of integrated solid state relay solutions. These are available in DIP, SDIP (DIP with SMD lead forms), and SMD packages. They range in output voltage from 60 V to 400 V, and in current from 100 mA to 2 A.

Application Examples

- Programmable logic controller I/O relays
- High-voltage mechanical relay replacement
- Industrial testers
- Integrated industrial sensor modules
- Welding equipment
- Heater controllers

Features

- Low output leakage current (> 1 μ A)
- Load voltage = load DC voltage
- No moving parts
- Small form factor
- No contact arcing
- High isolation voltage (up to 5300 V)
- Available in through-hole and SMD packages

					
	LH1546AT	LH1546AD	LH1525AT	VO14642AT	LH1526XX
Load current	120 mA	120 mA	250 mA	2000 mA	125 mA
Load voltage	350 V	350 V	400 V	60 V	400 V
V_{ISO}	3750 V	5300 V	5300 V	5300 V	5300 V
R_{ON}	35 Ω	35 Ω	36 Ω	0.25 Ω	36 Ω

MOSFET High-Power Solid-State Relay Solutions PV MOSFET Driver-Based High-Power Solid-State Relay Solutions

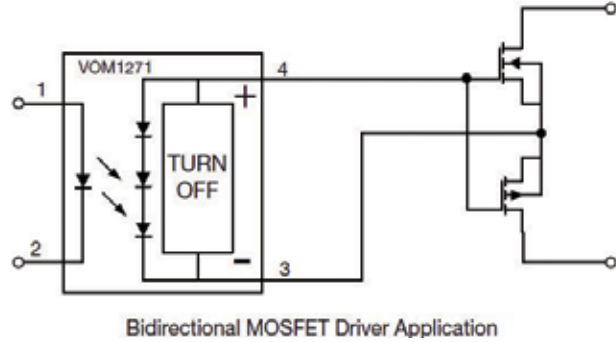

Vishay’s portfolio of standalone PV MOSFET drivers allow customers to economically implement board-level solid-state replacements to high-power mechanical SSRs, with the greatest degree of simplicity and minimum number of parts. This makes the replacement of high-power mechanical parts possible for applications that would otherwise require costly high-power industrial relay modules.

Application Examples

- Industrial motor controls
- “Hockey puck” SSR replacements
- Heater controllers
- Fan controllers
- Pump controllers
- Solenoid drivers

Features

- No need for secondary side driver supply
- Small form factor
- Single-component power MOSFET driver solution

	 VOM1271T	 VO1263
$I_{SC} (I_F = 20 \text{ mA})$	30 μA	21.0 μA
$V_{OC} (I_F = 20 \text{ mA})$	8.7 V	14.7 V
V_{ISO}	4500 V	5300 V

AC Variable-Speed Industrial Drives

Vishay’s portfolio allows customers to cost-effectively isolate the power stages of high-power switching stages. The isolation provided by these parts can be used to design circuits that are both safe and robust to electrical noise interference.

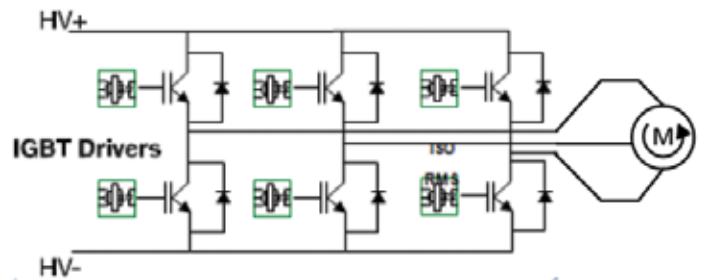

Application Examples

- PWM industrial AC variable speed drives
- PWM heater controllers
- PWM fan controllers
- PWM solenoid drivers

Optically Isolated IGBT / MOSFET

Features

- Low propagation delay
- High V_{CC} operation
- Low quiescent current
- High output current drive
- High noise isolation
- High working and transient voltage isolation

	VO3120	VO3150A	VOL3120	VOW3120
	I_{OUT}	2.5 A	0.5 A	2.5 A
	I_{CC}	2.5 mA	2.5 mA	2.5 mA
	V_{IORM}	890 V	890 V	1050 V
Package				

IPM Drivers

Features

- High noise isolation
- High voltage Isolation
- Flexible output configuration
- Low propagation delay

	VOM452T / VOM453T	
	Data Rate	1 MBd
	V_{ISO}	3750 V
	CMTI	15000 V/ μ s
Package		

Isolated Industrial Communications High-Speed Optocouplers

Vishay's portfolio of high-speed opto-isolators allows designers to isolate industrial communications busses such as RS485, Profibus, SPI buses, etc... It not only provides bullet-proof safety isolation but also provides extremely effective noise isolation, which is common in industrial environments.

Application Examples

- Isolated RS485
- Isolated Profibus
- Isolated CAN
- Isolated SPI
- Isolated 4 mA to 20 mA com loops
- Smart metering

Features

- Up to 10 Mbps data speed
- High noise isolation
- High working and transient voltage isolation
- Wide variety of packages
- Open collector and totem pole outputs

OPTOELECTRONICS

Guide to Industrial Applications

Small-Angle, Surface-Mount Emitters and Detectors

Emitters with $\pm 10^\circ$ Angle of Intensity

Gullwing

Reverse Gullwing

Part Number	Package Form	Peak Wavelength (nm)	Radiant Intensity (mW/sr)	Angle of Half Intensity (\pm°)	Rise Time (ns)
VSMY2850RG	Reverse gullwing	850	100	10	10
VSMY2850G	Gullwing	850	100	10	10
VSMG2020X01	Gullwing	850	40	12	20
VSMG2000X01	Reverse gullwing	850	40	12	20
VSMF2890RGX01	Reverse gullwing	890	40	12	30
VSMF2890GX01	Gullwing	890	40	12	30
VSMB2020X01	Gullwing	940	40	12	15
VSMB2000X01	Reverse gullwing	940	40	12	15

Photo Detectors With $\pm 15^\circ$ Angle of Sensitivity

Gullwing

Reverse Gullwing

Part Number	Output Type	Package Form	Peak Wavelength (nm)	Spectral Bandwidth (nm)	Output Current	Angle of Sensitivity (\pm°)
VEMD2500X01	PIN Photodiode	Reverse gullwing	900	350 to 1120	12 μ A	15
VEMD2520X01	PIN Photodiode	Gullwing	900	350 to 1120	12 μ A	15
VEMD2000X01	PIN Photodiode	Reverse gullwing	940	750 to 1050	12 μ A	15
VEMD2020X01	PIN Photodiode	Gullwing	940	750 to 1050	12 μ A	15
VEMT2000X01	Phototransistor	Reverse gullwing	860	790 to 970	6 mA	15
VEMT2020X01	Phototransistor	Gullwing	860	790 to 970	6 mA	15
VEMT2500X01	Phototransistor	Reverse gullwing	850	470 to 1090	6 mA	15
VEMT2520X01	Phototransistor	Gullwing	850	470 to 1090	6 mA	15

Large-Angle, Surface-Mount Emitters and Detectors

Emitters With $\pm 60^\circ$ Angle of Intensity

Part Number	Package Form	Peak Wavelength (nm)	Radiant Intensity (mW/sr)	Angle of Half Intensity (\pm°)	Rise Time (ns)
VSMG2720	PLCC-2	830	14	60	15
VSMG2700	PLCC-2	830	10	60	20
